

Thank you for purchasing the rear radar mount. The 3d printed mount is universal and can be used with a variety of devices from Garmin, Magene or Bryton.

The quarter turn mount insert orientation determines which device fits if the tabs are oriented horizontally it will work with the Garmin Varia line, if they are vertical then they will work with the Magene unit. Bryton is a whole different insert.

A couple of points with installing.

1. The mount portion that wraps your seat post will need to be pulled open just enough to fit. **Too much will break it**
2. The mount should be placed so the top portion leans back towards the post (seat post \ mount)
3. We suggest at minimum running a layer of electric tape as a means of protecting your frame.
4. **We do recommend using a lanyard or tether as an extra means of lose protection for your radar or any electronic devices to avoid lose**
