

Mounting the Magnetic Catch Bottle Opener

When you receive your opener there will be a small bag a set of screws and taps.

If you choose to use the “keyhole” brackets that are already mounted use the shorter screw and taps.

Remove the Blue Tape from the back of the opener (it has two marks on it for DRILL HERE) and place it on the wall where you are looking to mount your opener (preferable in a strong wall material or one of the wall studs)

Drill two small pilot holes where the DRILL HERE marks are. (Use a small drill bit)

Gentle hammer in the taps

Screw in the screw leaving them about approximately 1/8 to 1/4 inches.

Mount the opener to the wall aligning the screw to the “keyhole brackets”

For a sturdier mount you can remove the Screw from the METAL BOTTLE OPENER.

FIND a Wall STUD, re-mounting the METAL BOTTLE OPENER using longer SCREWS into the Wall STUD.
