

NubHex3 and Nubhex are great for in shop application or in your saddle bag and were designed to cover all the common sized hex bolts **3mm**, **4mm** and **5mm**.

Couple things to keep in mind:

1. Not for use with heavy duty cleaning chemicals, acetones, mineral spirits etc.
2. Not for high heat application or situation.
3. Not for HIGH torque applications - Too much torque will cause the hex bit to slightly turn in the housing and you will need a pair of pliers to turn back and remove the bit if needed.
4. With the **NubHex3 DO NOT** insert main hex bit beyond line on bit. These are designed to be friction fit, fully inserting the main bit will make it harder to change bits when you need to

Thank you for your support, *Bryan Blake* - **Shamrockwood315.com**
