

ChainThang is designed to be a quick convenient way to clean up your chain after a ride which will help your chain live longer. It is not designed to be a complete deep cleaning device. See below for some tips and such. **NOT DESIGNED FOR USE WITH ACETONE OR OTHE HARDH CHEMICALS.**

1. To use spray brushes with chain cleaner (I use simply green)
2. Slide ChainThang over your chain and then spin the cranks.
Re-orient ChainThang and spin cranks until your chain is clean.
3. Wipe chain with clean dry rag to remove excess cleaner. Re-lube your chain
4. **If you WAX your chain DO NOT use cleaner just dry brushes and use step 2 only (no need to lube unless you use a quick touch of drip wax)**

Do not leave ChainThang soaking in chain cleaner as it will degrade the plastic.

You can use any cheap dollar store toothbrush for replacement if the head is 1.25" x .5" (31.75mm x 12.7mm)

To replace head clip off handle remove the 3 screws, discard old brushes, replace with new heads and return screws.
